

UX Research Report

Your Name

August 12, 2025

Abstract

This report summarizes the findings from a recent UX research study, outlining objectives, methodology, key findings, and actionable recommendations.

1 Executive Summary

A brief overview of the study's purpose, major findings, and recommendations. UX principles from **nielsen1994** and cognitive design considerations from **norman2013** were applied to interpret the results.

2 Research Goals

State the objectives of the research and what questions you aimed to answer.

3 Methodology

Describe the approach used (e.g., usability testing, interviews, surveys).

- Participants: Number, demographics, recruitment
- Tasks: What participants were asked to do
- Data collection methods

4 Participants

Details about the participants:

- Age range
- Technical proficiency
- Relevant experience

5 Key Findings

5.1 Finding 1

Describe what you observed and how it relates to usability heuristics **nielsen1994**.

5.2 Finding 2

Another observation, supported by design theory **norman2013**.

6 Design Recommendations

Provide actionable recommendations for improving the user experience.

7 Figures and Tables

Example of inserting an image:

Example of a table:

Task	Success Rate	Time (s)
Login	92%	12.3
Checkout	68%	45.7
